NEW AIA REGISTERED CONTINUING EDUCATION COURSE**

DESIGNING WITH METAL

AIA COURSE NUMBER: IBE07A

The Designing with Metal presentation provides an understanding of the benefits of using metal over alternative materials. This course covers both wall and roofing applications and how they are used within different construction building types. The design professional will learn which characteristics should be considered when choosing metal, develop an understanding of its sustainability, performance, finishes and best practices for its installation. Case studies and project examples will be provided to help illustrate the benefits, diversity and unique properties of using metal on various projects.
